Abstract. *The research presents in the first part of the article the proof that humans can change in principle the state of each main energy center. This means self-control. It means otherwise that you can succeed in their alignment. And if you have a very good alignment of the energy centers, you have a very good balance of your body. This means also fewer chances to become ill and also good possibilities to live with a good psychic state. The measurements were realized using a Bio Well device connected to a laptop. Different images presented offer a clear justification of the significant displacement of the fourth energy center of the human being. The second part of the article reveals how the Romanian invention called the therapeutically device with polarized light, can improve a person's state. The third set of measurements presented in this article was made using another Romanian invention rewarded with six gold medals, one of them in Geneva, and not only receiving other awards, the Bio-Chips Doctor Tech. In this case four chips were placed on a car wheel. The general state of the person was evaluated again by means of a Bio Well device. All the three types of the measurements are very original. The general purpose of the article is to show that we can do more in different ways for us and also for others in order to improve the health, the level of energy and the level of performance for every interested person.*

Keywords: The complex human being, the human main seven energy centers, the therapeutically device with polarized light, the Biochips devices, the human energy level, the human health, the Bio Well device, the human stress, the human general balance, the human organs misbalance.

Introduction

The capability to modify the main seven energy centers state of the human body is the premise of an increased intern balance. To support this idea we want to show in the first part of the article that the first author of the paper could change the fourth energy center state by his own will. This thing can be done without moving your body at all.

The second part of the article presents a new device realized by a doctor, a therapeutically device with polarized light which has the purpose to improve the persons general state, their health, their energy level and to improve their performances.

The third set of measurements used the author's original BioChips posed on a car wheel. They are designed to improve the general condition of the car driver during every transport. The Bio Well device was repeatedly presented by us in previous papers.

The human balance control through the energy centers state

The capacity to control the state of our intern energy centers was investigated by us in two previous articles (Mândrea and Curta, 2019) and (Mândrea et al., 2018). In the first one the authors presented with measurements the displacement of the first energy center of the body with 8% in two successive actions. It is the bottom center of the body depicted with red in the images offered by the Bio Well device. In the second one the authors presented with measurements the displacement of the second energy center of the body with more than 14% in two successive actions. Now the state of the fourth energy center has been changed as can be seen in figure 1 where the green disk is the most moved to the right.

**PICBE |
1270**

**Figure 1. The most significant image for the displacement of the fourth energy center
(The article's first author)**

Source: Authors' own research.

The Bio Well device, the white box connected to the laptop can be seen also in figure 1.

The displacement of the third and the sixth energy centers were realized with the occasions of other measurements. They will be presented in future articles because of lack of space. To change the state of the fifth energy center is dangerous because there are the thyroid and the parathyroid in the vicinity zone and they can be affected. To change the state of the seventh energy

center is more difficult because it is the place where the soul gets out of the body (Mândrea et al., 2017), (Mândrea, 2014), (Mândrea, 2011).

The displacement of the fourth energy center in two steps can be seen in figure 2. In fact the subject, the first author of this article, changed the state of the fourth energy center, but we use the world displacement because this is what can be seen in the images provided by the Bio Well device.

**Figure 2. The displacement of the fourth energy center was realized in two steps.
(The article's first author)**

Source: Authors' own research.

**Figure 3. The superposed displacement of the fourth energy center
(The article's first author)**

Source: Authors' own research.

We consider that we proved the displacement of the fourth energy center because the movements were realized in the same direction, from left to right in figure 2 and figure 3. From an alignment of 99.67% in the left image in figure 2, the subject reached 91.21% in the center image and 77.99% in the right image. This means a difference of 21.68% in two moves! Finally,

everyone's purpose is to realize an alignment of all seven energy centers close to the symmetry vertical line of the human body to have an optimal intern balance.

The therapeutically device with polarized light

The second type of investigation was done using the device presented in figure 4. It represents the invention of Doctor Dumitru Bădilă from Smarteck S.R.L., Bucharest, Romania (Bădilă, 2020). The device was designed to energize extended surfaces of the human body but also to solve dermatological affections. It has the possibility to modulate the light with a certain frequency from a row of frequencies.

**PICBE |

Figure 4. The therapeutically device with polarized light (the left part) and the same device in function together with the Bio Well device (the right part).

Source: Authors' own research.

The device is working in the light wavelength range 400-900 nm. The power density for a length of 30 cm is 40mW/cm². It is working at the tension of 220-230 V and the power absorbed is 40 W. The emitted light flux has 7000 lumens. The colour temperature is 3000K.

The first measurement with the results presented in figure 5 with orange was a reference measurement. After using the therapeutically device for three minutes on energy center number 4, the stress diminishes and the energy increases even if the subject didn't drink or eat, the second measurement with violet. But because the subject received energy at constant parameters the balance decreased and the organ's disbalance increased. Our body is clever enough to convert the energy received into useful energy for us but only for a short time. The exterior devices which provide us a rough energy at constant parameters are better to be used a short period of time, so that our body can be able to absorb a limited amount of energy, as we presented also in (Mândrea et al., 2019) referring at electrical lines functioning at high voltages. It can be seen also in figure 6 that at the beginning (left, reference) the subject had 4 big imbalances. After using three minutes the therapeutically device the big imbalances on different organs and glands disappeared (right part).

Figure 5. The subject stress, energy and balance for the three measurements.
(The article's first author)

Source: Authors' own research.

After using the therapeutically device for five minutes on energy center number 4, only the energy increases but the organ's disbalance grows a lot. The conclusion is that we can use the therapeutic device for short periods of time but with long pauses. We can use it repeatedly but only for two-three minutes to increase our energy but also to allow our body to convert the energy into a useful one for us.

The Bio-Chips on the car wheel

The third type of investigation was done using the Bio Chips Doctor Tech and a Bio Well device to record the results. The Bio Chips are an invention of our researchers from the "Iustin Capră" Association. They have received 6 gold medals, one of them in Geneva in 2019. The last two gold medals were received in 2020. They received international appreciations as can be seen in (Travel cushion, 2019), (Biocip kit, 2019), (Medical bracelet, 2019), (Velcea et al., 2017), (Velcea et al., 2019), (Mândrea et al., 2019).

Our Bio Chips are passive devices which are activated by the energetic imbalance manifested by a high electric potential of the acupuncture points where they are placed. They start to work when they are placed on the acupuncture points in a misbalance. They stop functioning when an energetic balance is reached. We can let them on the body and they will restart their action at the moment of another misbalance apparition. A state of waiting is installed between the activity periods. We have presented the Bio Well device many times before in our previous articles as (Mândrea and Curta, 2019), (Mândrea and al., 2019), (Mândrea et al., 2018), (Mândrea and Chirilă, 2017). It is a device used to characterize the health state and the energy state of a human being (Korotkov, 2014), (Korotkov, 2007), (Korotkov, 2002), (Yakovleva and Korotkov, 2013). In our case four Bio Chips were placed on the subject car wheel, symmetrically on each side of the wheel. Two of them can be seen in figure 7 and the other two are placed under the subject palms. So wherever the subject holds the wheel, up or down, two Bio Chips will be always under his palms.

**Figure 7. The Bio Chips Doctor Tech placed on the subject car wheel
(The article's first author)**

Source: Authors' own research.

The subject, the first author of this article, was measured once before and twice after using the Bio Chips. The results in terms of stress, energy, general body balance and organs balance are presented in Figure 8. After 20 minutes, the subject felt some kind of pressure under his palms, due to continuous energy exchange with the Bio Chips. The stress has shrunk and the general balance has increased to 99.24% which is a very good result. To reach previous results, a part of the energy was consumed, as can be seen also in figure 8. A better alignment of the seven energy centers was also obtained, as can be seen in figure 9.

Conclusions

The control of the seven main energy centers of the human body has a major role for the complexity of the human being functioning. The proof we brought to demonstrate in time, in different articles, that humans can control the state of each energy center state is a major breakthrough. A complete intern balance could be reached, which leads to a good physic and psychic state for everybody.

The therapeutically device with polarized light can help people to repeatedly obtain a surplus of energy for short periods of time and can eliminate major organs and gland imbalances. Through polarization, Doctor Dumitru Bădilă obtained some kind of synchronization for the light waves. It is a certain order, for example when in an orchestra all are singing together. If everybody is singing alone, without paying attention at the others, it will result only in noise. When the conductor appears, the device with polarized light, the music will appear. The effect of the polarized light on the cells is due to the membrane stabilization. The therapy with polarized light has very low costs and does not require medical knowledge. More about this subject can be seen in (Brill, 2000), (Pye, 2001). Look at some links about the surprising effects of the light in bibliography at <http://>, <https://>. The functioning conditions of the therapeutically device with polarized light must be: temperature in the range of 10°-40° Celsius and humidity maximum 80%.

The utility of the Bio Chips was shown before in our articles (Velcea and al., 2019), (Velcea and al., 2017), (Mândrea and al., 2020), (Mândrea and al., 2019), (Mândrea and al., 2019).

The Bio Chip devices proved their utility also this time when they were put on the subject's car wheel. As could be seen in this material, the first author of this article has always four Bio Chips fixed on his car's wheel and his partners in this article are the same. An important advantage of the Bio Chip is that, being passive devices, they use almost continuously the energy produced by your own body, so they cannot harm you in any way.

We obtained all our justifications using the Bio Well device which was realized based on different researcher's results (Korotkov, 2014), (Korotkov, 2007), (Korotkov, 2002), (Yakovleva and Korotkov, 2013), (Becker and Selden, 1985), (Bevk et al., 2000), (Boyers and Tiller, 1973), (Chiang et al., 2005), (Cohen and Popp, 2003), (Cohen and Popp, 1997), (Connor and Schwartz, 2007), (Devaraj et al., 1997), (Dobrin et al., 1979), (Dobrin et al., 1975), (Edwards et al., 1990), (Edwards et al., 1989), (Inaba et al., 2000), (Inaba et al., 1998), (Kilner and Cantab, 1911), (Moss and Johnson, 1973), (Rubik, 2004).

The Bio Well device was very useful for us and with different occasions we checked it's functioning and obtained very original results (Mândrea et al., 2020), (Mândrea et al., 2019), (Mândrea and Curta, 2019), (Mândrea et al., 2019), (Mândrea et al., 2019), (Mândrea et al., 2018), (Mândrea and Chirilă, 2017), (Mândrea and Curta, 2017), (Mândrea et al., 2017), (Mândrea and Curta, 2017), (Mândrea and Torp, 2016), (Mândrea et al., 2015).

Considering the last two sets of measurement we conclude that wearing Bio Chips on different acupuncture points or places where we have a pain while using the therapeutically device with polarized light can be an optimum choice. Thus all the parameters can be improved for a certain period of time.

We consider that the novelties proposed in our article can improve the complex human beings to achieve new levels of well being and performance for everybody.
